Meet The Hero and Boss

Wizard Hero vs Alien Boss

The wizard is the hero. The alien is the boss.

WIZARD
helps the hero

ALIEN
is the boss

SPEAKER: JONAH JOSEPH // STORY & OBJECTIVE

Should the Wizard
ATTACK or **WAIT**?

VS

ATTACK

WAIT

The wizard uses clues to choose.

The AI Looks at 3 Clues

Before the wizard chooses, the AI checks simple clues.

Health

Can I fight?

More health helps.

Armor

Am I safe?

Armor protects me.

Boss

Is it close?

Close boss means danger.

Clues = What the AI looks at first

Next: The AI gives stars to the clues that matter most.

When Does the Wizard Attack?

Health and armor give the wizard stars.

High health

2 stars

+

Armor

1 star

=

Total

3 stars

3 or more stars means attack!

Stars show what the AI cares about most.
In real AI, those stars are called weights.

Weights Help the AI Choose

★ In the Game

❤️ Health = ★ ★

🛡️ Armor = ★

More stars = more important

Health gets 2 stars.

Armor gets 1 star.

🧠 What it means

Weights tell the AI what matters most.

More stars = pay more attention

2 stars matter more than 1 star.

What to say: Health has more stars, so it matters more. That is what a weight means.

Bias Gives One Extra Push

★ In the Game

Need 3 stars to ATTACK

♥ Health = ★

🛡️ Armor = ★

Total = ★ ★
Not enough

Bias = + ★ bonus star

★ ★ + ★ = ★ ★ ★ → ATTACK!

🧠 In AI

Bias = extra help

It gives the AI one extra push before it chooses.

Bonus star = bias

What to say: Bias is like a bonus star. It gives one extra push so the wizard can attack.

Activation Is the Final Rule

After the AI counts the stars, the final rule tells it what to do.

The Rule

★ ★ ★ or more = ATTACK ✂️

★ ★ or less = WAIT 🛡️

Example

Wizard has ★ ★

+ bonus star ★

Now ★ ★ ★ = ATTACK!

AI word: Activation Function = Final Rule

What to say: The final rule checks the stars and chooses Attack or Wait.

How the Wizard Chooses

No big table — just 3 easy steps.

WIZARD

1

Look at clues

♥ Health has
★ ★

2

Add bonus

🎁 Bias adds ★

3

Make choice

★ ★ ★ = ATTACK

ALIEN

Example: ★ ★ + ★ = ★ ★ ★ → ATTACK 🗡️

Easy rule: 3 stars = ATTACK | 2 stars or less = WAIT

What to say: The wizard counts the stars. If he reaches 3, he attacks.

Try the Wizard Game

1  Open the game

2  Pick the clue

3  Count the stars

4  Attack or Wait

 This game shows how AI makes a choice.

WIZARD

ALIEN

CLUES

 ATTACK

 WAIT

Look → Count → Choose

Real AI Makes Choices Too

Our wizard game is a simple way to understand how AI chooses.

Car AI

Looks at the road

Stop or go

Voice AI

Listens to words

Give an answer

Game AI

Watches the player

Attack or hide

Our Wizard

Counts the stars

Attack or wait

1. Look at clues → 2. See what matters → 3. Make a choice

★ **Weights = What matters most**

Bias = Extra help

Activation = Final choice

What to say: Real AI also looks at clues and makes choices, just like our wizard game.

Reflection: What We Learned

We used a simple game so an 11-year-old can understand how AI makes a choice.

The wizard looks at clues, counts stars, gets one bonus star, then chooses.

Weights

Weights show what matters most. More stars means the AI pays more attention.

Bias

Bias is one extra push. It can help change the final choice.

Activation

Activation is the final rule. In our game: 3 stars = attack.

Main reflection:

AI is not magic. It uses clues, decides what matters, adds bias, and follows a rule to make a choice.

MISSION ACCOMPLISHED // XP MAXED

VICTORY ACHIEVED!
